R

Maxima

R

R is a language and environment for statistical computing and graphics, similar to the S language and environment. It provides a wide variety of statistical (linear and nonlinear) modelling, classical statistical time-series analysis, classification, clustering and graphical techniques, and is highly extensible. The S language is often the vehicle of choice for research in statistical methodology, and provides an Open Source route to participation in that activity.

Help

-- Function: factor (<expr>)
 -- Function: factor (<expr>, <p>)
 Factors the expression <expr>, containing any number of variables or functions, into factors irreducible over the integers. `factor (<expr>, <p>)' factors <expr> over the field of integers with an element adjoined whose minimum polynomial is <p>. `factor' uses `ifactors' function for factoring integers. `factorflag' if `false' suppresses the factoring of integer factors of rational expressions. `dontfactor' may be set to a list of variables with respect to which factoring is not to occur. (It is

Maxima

Maxima is a system for the manipulation of symbolic and numerical expressions, including differentiation, integration, Taylor series, Laplace transforms, ordinary differential equations, systems of linear equations, polynomials, and sets, lists, vectors, matrices, and tensors. Maxima yields high precision numeric results by using exact fractions, arbitrary precision integers, and variable precision floating point numbers. Maxima can plot functions and data in two and three dimensions.
