Project Overviews

- When a project is hosted on Launchpad, it is given an Overview page that describes the purpose of the project
- These pages give details on the following:
 - What the project uses Launchpad for
 - Where more info can be found about the project
 - How you can help with the project
- Example: <https://www.launchpad.net/ubuntu>

Ubuntu

Ubuntu is a complete Linux-based operating system, freely available with both community and professional support.

Ubuntu also includes a wide variety of software through its network of software repositories. Once your system is installed you can simply call up a list of all the existing tools out there and choose any of them for immediate installation over the internet.

Bugs

- Launchpad provides bug tracking for projects hosted on the site
- Users can view, comment on, and report bugs
- On Ubuntu, we recommend you use “ubuntu-bug <packagename>” in a terminal to report a bug
 - This will collect debugging info from your system, then bring you to Launchpad where you can look to see if the issue has already been reported
- For more info: <https://help.launchpad.net/Bugs>

Bug Description

Binary package hint: origami

I have origami installed on my 64-bit Ubuntu 10.04 system. Unfortunately, I have had little luck with it working properly. I have only received, worked on, and sent back 1 or 2 units in the past few weeks. The majority of the time (and for the past week now), the FAHlog shows that a connection cannot be made to the servers. I completely uninstalled origami and reinstalled today with no success.

Here is the message from the log (which is repeated):
[06:26:07] + Attempting to get work packet
[06:26:07] - Connecting to assignment server
[06:26:08] + No appropriate work server was available; will try again in a bit.
[06:26:08] + Couldn't get work instructions.
[06:26:08] - Attempt #17 to get work failed, and no other work to do.
Waiting before retry.

I leave my computer on 24/7 now, for the purpose of allowing it to fold overnight, but these error messages just build up over several days.

Before, when I had a unit to work on, running "origami status" caused my terminal to be filled with "|" marks. There were so many that I could not actually see any of the information normally provided (name, link to stats, etc.) but when I checked the log it would say it was ###% done, so the unit was actually being worked on.

Done

Blueprints

- Blueprints are hosted on Launchpad for projects as a way to help them keep track of goals
- You can view current plans by clicking “Blueprints” on a project's page
- Users can subscribe to blueprints if they want to keep track of a project's progress
- For more info:
<https://help.launchpad.net/Blueprint>

Translations

- Launchpad allows users to help translate projects into different languages
- Everyone is welcome to help translate for Ubuntu packages, and it is a great way to begin getting involved with the community
- To see how translation in Ubuntu is progressing, you can go to:
<https://translations.launchpad.net/ubuntu>
- For more info:
<https://help.launchpad.net/Translations>
